

Gain Hands-On Experience with  
Our Step-by-Step Approach

# FLO-Master Training

PIPE-FLO® is easy to use, but like any comprehensive software tool, there are many program features that will save you time and effort that you might not be aware of. A little training might be the answer to fully utilize PIPE-FLO's potential for improving your proficiency for using the program.

In our FLO-Master Seminars, our instructors demonstrate a step-by-step approach to use on your next piping project.

After attending our FLO-Master Seminar you will be able to take advantage of the latest program features, build your own system models faster, and tackle the most complex fluid piping projects

with efficiency.

The two-day seminar provides a detailed understanding of how piping systems operate. By simulating the interaction of pipelines, pumps, components and controls throughout the system, you will gain a greater knowledge of piping system devices and how they operate as a system.

## FLO-Master Seminars will help you:

- Build a PIPE-FLO model of your piping system in less time.
- Understand fluid flow theory to gain an understanding of the total piping system.
- Increase your proficiency in the use of PIPE-FLO and become a valued resource to your company.
- Spend less time learning how to use the software and more time evaluating piping projects.
- Maximize the use of PIPE-FLO's program features and increase your productivity.

This training seminar qualifies for **15 Professional Development Hours** (PDH) needed to meet the continuing education requirements for Professional Engineers in many states.

## Who should attend?

FLO-Master Seminars are ideal for those using the PIPE-FLO program to design, build, operate, and maintain fluid piping systems. For over eighteen years, professionals involved in piping projects have benefited from the FLO-Master Seminars.

Both new and experienced PIPE-FLO users will gain from this class because it is as much about piping system operation as it is about the software.

## Onsite Corporate Training

Save time and travel expenses with an Onsite FLO-Master Training class. Our expert instructors deliver onsite training to you and your plant staff.

Classes can be conducted on your site for up to 12 attendees, saving you time away from the office and enabling us to focus on critical topics specific to your piping system.
