

PIPE-FLO® Professional - FLO-MASTER Training

WHAT IS FLO-MASTER?

FLO-Master Training provides attendees with a detailed understanding of how piping systems operate. By simulating the interaction of pipelines, pumps, components, and controls throughout the system, participants will gain a greater knowledge of piping system devices and how they operate.

During the FLO-Master Training, instructors demonstrate a comprehensive step-by-step approach to using PIPE-FLO® which covers features, tips, and tools that are not available through the basic program tutorial.

After attending a FLO-Master Training, attendees will be able to build PIPE-FLO® system models faster, tackle the most complex fluid piping projects, and design a more efficient piping system.

WHO SHOULD ATTEND?

FLO-Master Trainings are ideal for those using the PIPE-FLO® Professional program to design, build, operate, and maintain fluid piping systems. Both new and experienced PIPE-FLO® Professional users will gain from this class because it covers everything from piping system operation to a comprehensive exploration of the PIPE-FLO® software.

FLO-MASTER COURSE OBJECTIVES:

Attendees will learn how to:

- Build a PIPE-FLO® Professional piping system model in less time
- Use fluid flow theory to gain an understanding of the total piping system
- Maximize the use of PIPE-FLO® Professional's program features and increase productivity while decreasing capital, maintenance, and operating costs

COURSE TOPICS:

- PIPE-FLO® Professional User Interface
- Building a Piping System Model
- Calculations
- Model Validation
- Using Lineups to Model Different Operating Scenarios
- Modeling Engineering Designs and System Modifications
- DataLink
- Designing Modifications and Troubleshooting Piping Systems
- Data Import

Course Options:

Engineered Software, Inc. offers a variety of FLO-Master training courses to meet your business needs. All courses are taught in US units.

FLO-Master Regional

Each year, we offer a regional course for up to 16 students to get hands-on training from our Senior Engineers. In 2017, these courses will take place in Seattle, Wash. and each attendee will have a computer and copy of PIPE-FLO® Professional to gain hands-on training.

2018 COURSES

- July 17-18, 2018 | **Columbus, OH**
- November 6-7, 2018 | **Houston, TX**

COURSE DETAILS

- \$1,095 per student | maximum of 16 students per class
- 2 days | 8am to 5pm
- Instructor-led
- 1 Crane Technical Paper 410 per student
- 1 course workbook per student
- Worth 16 Professional Development Hours (PDH) per student

FLO-Master Onsite

FLO-Master on-site courses are perfect for companies that have more than 12 attendees and want to gain a hands-on experience of PIPE-FLO® Professional at their facility. This option is ideal for companies who do not want to interrupt daily business practices and may have attendees that attend the course with specific needs of the program. This is a custom course based on the specific needs of the company and its system.

COURSE DETAILS

- Starting at \$9,995 for 12 students; each additional student is \$650
- 2 days | 8am to 5pm
- Instructor-led
- 1 Crane Technical Paper 410 per student and 1 course workbook per student
- Worth 16 Professional Development Hours (PDH) per student

FLO-Master Webinar

If travel is not an option for your business, gain PIPE-FLO® Professional knowledge from the convenience of your computer. Our Senior Engineers will walk attendees through the FLO-Master training course over 4 days – 2 hours per day. This format is perfect for those who are looking for a quick overview of all facets of PIPE-FLO® Professional. Live webinars are offered anytime between 6am and 6pm Pacific Standard Time for four consecutive days.

COURSE DETAILS

- Starting at \$3,995 for 16 students
- 4 days | 2 hours per day. *Times must be scheduled between 6am – 6pm PST.*
- Maximum of 20 students
- Supporting publications can be purchased separately
